

ICGReport

Compatibilities

Fixed the issue while installing the program on a machine from scratch and with browser Internet Explorer 8 that made the graphics are not displayed.

In the Internet Explorer 9 now works correctly.

The version Java 7.17 has been added to the master.

Graphics library has been updated to version 2.3.5. The improvement of libraries is to improve compatibility with current browsers (explorer10, mozilla XX, chrome, etc).

Settings and corrections

The graphic repainting issue when you remove the filter has been fixed. Previously was not repainted after remove the filter.

It has been implemented for mobile devices and tablets that when logging horizontal screen display reports instead of the graph as it does in vertical.

It has been also fixed the issue for mobile devices and tablets that turning the device with expired session not disappears log in screen .

Fixed the horizontal strip in the graphical report that is produced by changing repeatedly mobile device orientation.

Fixed the issue regarding the white screen when you press several times on the calendar button.

It has been implemented the error messages displaying during the logging process if the connection was lost.

In ICGReport now the protection puts the User-Company screen to give users access like ICGManager.
