

# FrontRetail MOBILE

Increase the sales  
and reduce the  
waiting queue

High mobility  
to improve  
the customer service

Search of products  
by references,  
barcodes or families

Collection in cash  
or credit card through  
bluetooth PinPad

Receipts and invoices  
are sent to the  
customer by email

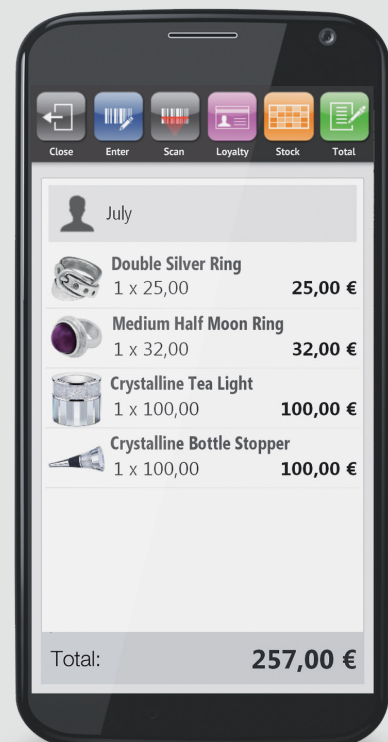

## What does FrontRetail Mobile offer?

It is a solution for Android devices which extends the features of **FrontRetail** in the store.

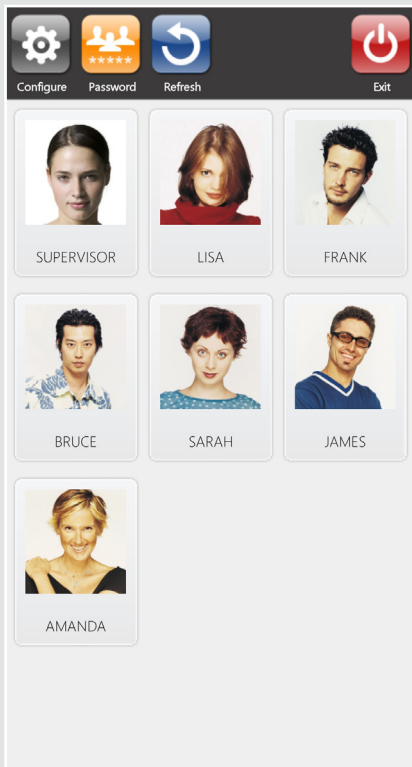

The seller improve the attention of the customers approaching to them and make the sale in an easy way, avoiding loss of sales due to the large queues.

From the same device, the seller scans the barcode of the products that the customer wants to buy and ends the sale, collecting in cash or credit card with a bluetooth pinpad. In addition the seller keeps the sale on hold in order to settle it in the POS.

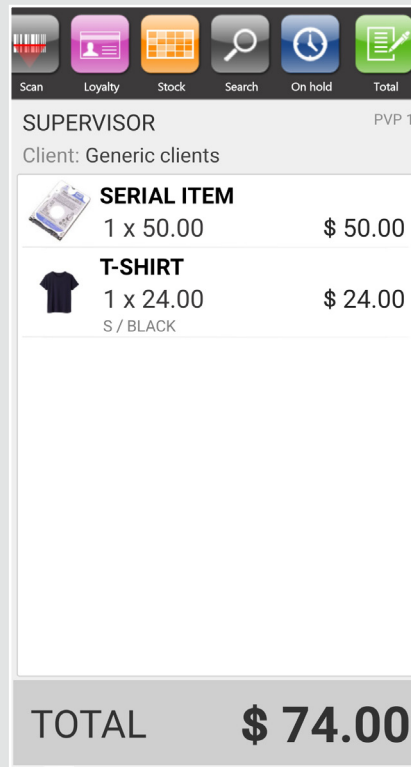

**FrontRetail Mobile** applies the same Mix & Match and loyalty conditions than **FrontRetail** and makes able to check the stock of the warehouses.
