

FrontRest

New features in version 2010

Cash control and more security

Block and auditing of open cash drawer

If the cash drawer allows for it, **FrontRest** can be blocked whenever the cash drawer is open, so that the user cannot perform any other action until the drawer is closed. You can also configure to emit a sound whenever the cash drawer is open for more than x seconds. The open cash drawer incidents will furthermore be logged in the audit.

Control safes

This version not only controls the cash money in the cash drawers of the POS, but also controls the balance of the safe of the establishment. If **FrontRest** uses a safe, the cash outs will automatically increase the balance of the safe. The safe is controlled from **ICGManager** and can be configured so that several terminals of an establishment share a safe, even though each till works on an autonomous database. Furthermore, from each terminal you can make money transfers from the safe to the bank and backwards.

Control multiple cash drawers per terminal

When the system is configured to work with several cash drawers, each seller has to select which cash drawer to use when registering. This way, all transactions will be registered by cash drawer and you can do an independent Z closing for each cash drawer.

New cash closing functions

There are two ways to make a cash closing: with or without cash declaration. If no cash declaration is made, **FrontRest** automatically transfers the calculated amount to the safe, and when a cash declaration is made it will transfer the declared money. Anyway, the safe control system allows you to recount the cash money transferred to the safe afterwards.

Access control for nightclubs and leisure parks

New platform for access control and entrance ticket validation, preselling and invitations through gates. The new version also includes the sale of entrance tickets in nightclubs valid for x minutes, and the creation of invited guest lists.

Customer loyalty

Offers loyalty cards with alphanumerical codes. Includes a function to search cards by customer name and the use of prepaid cards. As a last new loyalty feature, **FrontRest** allows to work with off-line cards linked to conditions and payment types.

New application for automating Self Service canteens

New application to create automatically tickets by reading a magnetic stripe card and sends them in real-time to **ICGManager** in the central. Ideal for company canteens where each employee has his own card and where it is necessary to report weekly or monthly who has accesses the canteen en when.
